

▶ A Deliberately Different Perspective

The UK's Leading Bird Control & Bird Proofing Experts

We specialise in providing solutions to bird and pest problems that many pest control companies are unable to deal with or don't have the experience to provide an effective solution.

Bird control requires specialised skill and knowledge of the wide variety of bird species, their behaviours and the legislative requirements that must be observed. We have even been appointed as sub-contractors for the likes of Rentokil, Ecolab, Mitie and many other pest control companies in our industry because they too recognise our expertise!

NBC's high standards are recognised as industry leading, so much so that we regularly participate in scientific research with FERA, Natural England and Scottish Nature.

► Expert Advice & Consultancy

As the UK's experts we provide consultation with government bodies for operations and licence application to ensure that our customers comply with the Wildlife & Countryside Act 1981. Our experienced bird control technicians manage conflict with birds responsibly and effectively so the risk of nuisance birds is removed.

“The best solution to prevent gulls nesting is proofing or a falconry programme before the nesting season begins in March”

Bird Control Solutions

Operating throughout the UK our expert bird control teams work on buildings of every type – new build, listed, industrial or derelict – and of every size - aircraft hangars, shops, warehousing, shopping centres, flats and more!

Our experienced bird control teams are able to design bird control programmes that can be implemented and installed quickly to protect your business. All of our bird proofing installations are fully guaranteed and provide years of savings and value.

Bird Scaring Products

NBC offers a wide range of electronic audio distress call systems, kites, gas guns and other products to help with situations of low pressure.

- ▶ For use in situations where the bird population is small or used in conjunction with a large control programme

Trapping & Culling

Sometimes it is necessary to cull nuisance birds and if licensing allows clients can be assured that NBC will carry out these operations legally, humanely and discretely keeping your company protected.

- ▶ A last resort but a quick method of controlling a localised bird population

Guano Cleaning

An increase in the number of feral pigeons and gulls moving inland means there is more bird mess to contend with than ever. Bird mess is unsightly, a slip hazard and a health risk to staff, customers and the public. Our guano cleaning services ensure affected areas are clean and sanitised to prevent bacteria and disease being spread.

- ▶ Cleans and sanitises an area for safe and hazard free access

Falconry Response

A natural method of control, experts have long recognised the effectiveness of using birds of prey to change nuisance bird behaviour. NBC has the largest expert team of falconry trained bird control technicians in Europe. Not simply falconers each technician is a trained and experienced bird control specialist.

The use of our specially trained and bred birds of prey will change a nuisance bird populations habits leading to them moving away from an area.

- ▶ Ideal for situations where traditional bird proofing is either not possible or economical

Bird Netting

Bird netting is used for areas of a building where there are large populations (high pressure) of nuisance birds where the birds are highly motivated to return either for breeding, nesting or roosting.

Netting is 100% effective when deployed correctly and is one of the most flexible bird control solutions available ideal for courtyards, rooftop air-conditioning, frontages or inside hangars or industrial warehouses. All of our netting installations are provided with a 5 year guarantee.

- ▶ 100% guaranteed to exclude populations of nuisance birds for the long term

Egg & Nest Removal / Egg Oiling & Replacement

Should licensing allow it, it can be necessary to remove nests particularly with regard to gulls nesting on roofs. Another option is egg oiling which prevents hatching and make the nesting birds less likely to return in future years.

- ▶ Reduces a bird population and discourages the return of the nuisance birds the following year

Avishock

The Avishock system is very discreet and a favourite with architects. It is a low profile track which emits an electrical pulse like an electric fence for cattle. It doesn't harm the birds but prevents them from perching or roosting.

- ▶ A low profile alternative to traditional spiking perfect for protecting business signage and ledges from roosting

Bird Gel

Bird Free gel works on all the birds senses emitting a UV light which appears as 'fire' and containing food ingredients, the smell of which birds find abhorrent. This combination of these elements ensures that nuisance birds avoid any bird free gel proofed area.

- ▶ A cost effective and low profile deterrent for low pressure situations

Bird spiking & bird wire

Bird spiking is suitable for areas where there are small populations of nuisance birds (light bird pressure) where the birds are roosting, perching or possibly nesting. Bird spiking when installed correctly acts as a physical barrier to the birds without harming them.

- ▶ Suitable for protecting high ledges, beams, signage or solar panning

“Importantly our technicians understand bird behaviour and have experienced every type of bird problem. Our bird control programmes deliver best value and are guaranteed to be effective, legal and ethical”

Risk Management

Birds can become a nuisance and conflict with business in many ways to create unacceptable risks – through bacteria in bird mess, nesting debris, aggressive behaviour - and increased cost through maintenance, delays or loss of customers.

The majority of situations we attend mean the birds are already adversely affecting a business. A comprehensive (and free!) survey is completed to understand the risks problem and identify a suitable control programme or proofing method.

Our experience and knowledge of UK bird species, their behaviours and the related law is industry leading and ensures we can prevent or remove any bird problems.

“Faeces and gull guano can be a particular risk as they contain harmful bacteria which can cause respiratory infections, and illness”

Compliance

Choosing the right bird control programme is essential to protect your business but so is compliance.

All birds are protected by the Wildlife & Countryside Act 1981. It is an offence to kill birds and take, damage or destroy nests or eggs, without having first explored non-lethal measures or obtaining a licence. Management of any birds under a licence can only be completed where the species is causing conflict with conservation or human interests.

NBC understands the legal requirements of bird control and that of your industry. We work across all UK industry sectors and understand that health and safety is a key issue for every business. Before any recommendation is made we complete rigorous risk assessments to ensure your business is protected from potential litigation.

The NBC Promise

We will:

- ✓ provide the widest range of in-house bird control solutions in the UK
- ✓ maintain our technicians training and professional development to ensure expert advice and recommendations
- ✓ price transparently and fairly to provide best value
- ✓ provide comprehensive surveys and risk assessments with method statements with expert recommendations
- ✓ operate ethically ensuring operations do not have an adverse effect on the environment and wildlife
- ✓ research and invest in innovation for our customers benefit

Some of the businesses who have benefited from our bird control services are:

- Vinci Facilities
- Euro Tunnel
- Keir
- Aviva
- National Grid
- Scottish Parliament
- Veolia Environmental Services
- NHS Trusts
